

## **Upgrade to First Class Seating with Hunt Comfort**

*"I sat on the cushion for an hour, and then I hunted with the cushion. It was amazing. A week later, I sat down to lunch and bought the company." -- David Robinson, president of Hunt Comfort*

What sets Hunt Comfort apart from other hunting cushion manufacturers you may ask? Our answer is simple – products that really work. Unlike the typical foam or air hunting cushions, Hunt Comfort uses unique medical-grade gel and foam that relieve back pressure and eliminate the pain of sitting still by distributing your sitting pressure and keeping your circulation flowing. No other hunting cushion can make that promise.

“Hunters often forget to consider comfort before taking to the field,” Robinson says. “But, once they’ve used one of our cushions, they realize what a huge impact Hunt Comfort can have on the enjoyment and success of their hunt.”

Hunt Comfort has built a reputation as “The Best Seat in the Woods®. We’ve put 10 years of scientific research and field testing into the design of our cushions. Numerous clinical tests and focus studies have proven that our design efforts have paid off. Participants in a recent study unanimously preferred Hunt Comfort over the leading competitors’ cushions, which is no surprise to us.

All of our products are hand-finished and examined by every worker. We are confident in the quality of our seats, and we back every product we build with a three-year guarantee.

In celebration of our ten-year anniversary, Hunt Comfort has introduced a variety of new cushion styles including one specifically designed for wheelchair-bound hunters. So, no matter your seating preferences, there’s a cushion for you.
